Advanced Solutions for Interactive Learning Environments

▶ University Lecture Halls

The TAIDEN conferencing microphone system used in university lecture halls supports increased intelligibility for the students and turns them into active participants in a student-instructor interaction.

Student microphones are available with polling buttons that will allow the instructor to measure retention percentage levels with a few quick questions. The distribution of answers can be displayed on audience screens.

▶ Distance Learning Centers

Conferencing systems help to automate the teleconference process required to tie classrooms together for distance learning applications by controlling the cameras to follow the open microphone.

Whenever a student microphone is activated, the cameras will pan/tilt/zoom to the location of that student. This process can be completely automated, or allow for a video technician to fine tune the camera shot for broadcast. The instructor can have touch-screen control over the activation of the student microphone.

- **Flush-mounted or table-top units:** students can position the devices away from their notebooks
- **Onboard speakers:** each student can hear the professor and fellow students clearly
- **Polling buttons (optional):** let the professor gauge how well the students are understanding the material
- **Instructor control:** students request to speak and the instructor can activate microphones via a touch panel

► Multi-Purpose Meeting Spaces

Many universities have multi-purpose meeting spaces for various departments and groups to meet. These rooms are often outfitted with movable tables that can be set up in a variety of configurations.

Media Vision offers the perfect solution in our complete all-in-one portable conference microphone. These systems are user-friendly and can be set up and operated by non-technical personnel. They come packaged in a rolling storage case so that they can be easily transported from room to room.

► Board of Directors Chambers

Whether your school board meets in a permanent facility or travels from one location to the next, Media Vision has a solution that will fit your needs.

With optional features such as software that manages your agenda and allows you to vote or poll, language interpretation capability, and digital recording into WAV or MP3 formats, you will be able to capture valuable meeting information and archive it for future reference.

- **Wired or wireless units:** lightweight and robust design for portable use
- **No interference:** system is immune to RF interferences from smartphones or Wi-Fi networks
- **Digital recording:** record meeting sessions into WAV or MP3 formats with date and time stamp
